Ipswich South Bank

Layout Name: Ipswich South Bank

Owned By: IRMA Juniors

Gauge: N gauge

Scale: 2mm

Area modelled: Ipswich area

Period: 2000-Present Day

Size of the Layout: 3ft x 8ft

Number of operators: For 1 day exhibition 2 operators but for a two day we need 5 operators

Insurance Value: £2,500 with stock

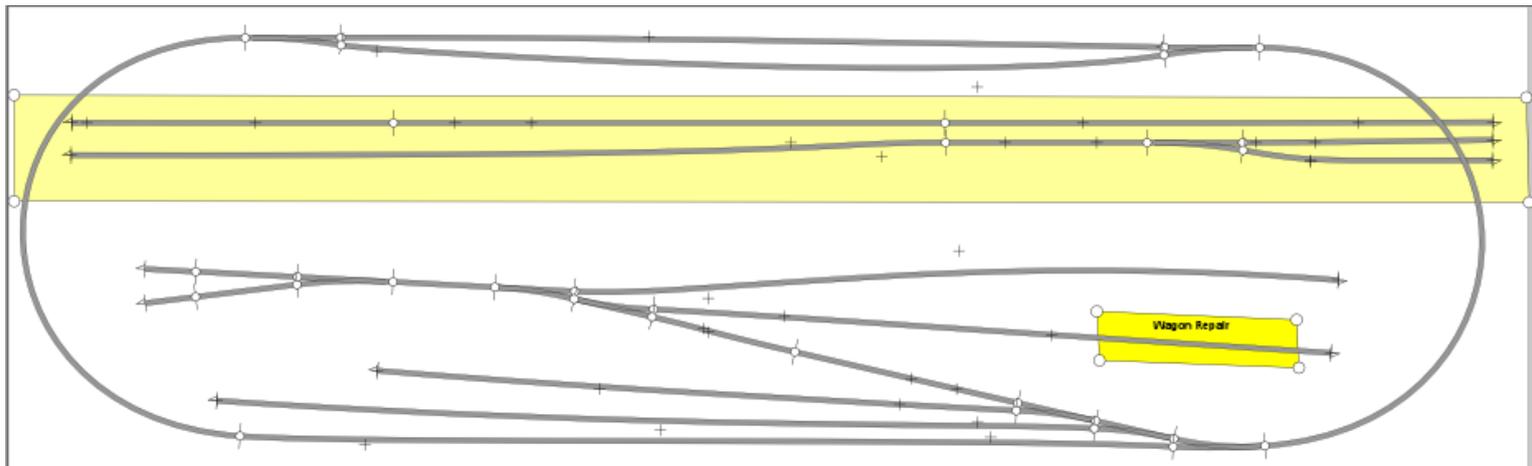

Charges: Will be based on the costs for fuel for an estate + 1 car for any additional operators. Refreshments and Food will also need to be provided.

Power requirements: Two 13 amp plugs

Layout Description The layout is Imaginary but based on the Ipswich area. Within the layout there is a cement works which is connected by a rail link and a road. There is also a wagon repair depot which is a busy depot repairing broken wagons. Behind the wagon repair depot we have fuelling and washing plant to wash and fuel the locos. You will be able to see anything from a class 08

to a 47 and class 37 to a class 60. On the layout there is also a 2 lane fiddle yard one lane as a passing loop and the other will be storage siding. There is also a raise part of the layout which is a passenger line going into a terminus station called Ipswich Riverside. This part of the layout will have automated running but it can also be manually controlled. The yard is can be operated from the front or the back of the layout with another person at the rear to change the points. The signals shall be operated by irdot controllers and will change automatically as the train runs past it. We have chosen to use readymade buildings but adapt some of them to our needs. They are mainly Farish Buildings but with a few other makes, and they will either be adapted or kept the same.

Here is the track plan.

This layout will be ready for exhibition by June 2011 but not all the extra wiring will be complete or scenic.
